

Working Together for a Greener Tomorrow

At 3e Training, we realize that achieving sustainable development will entail making changes in the way we live, work, produce and deliver goods and services.

We are dedicated to pursuing innovative business practices that will minimize our impact on the environment.

We have identified goals and objectives and implemented changes that have resulted in reducing our carbon footprint and our paper waste.

For instance, by using alternative delivery methods, we can reduce travel. We also try to plan ahead so that we can offer more than one course sequentially in a location, thereby cutting down travel.

In order to reduce the amount of paper being used, we:

- Consider what we print
- Use double-sided printing, where possible
- Use online resource materials as an alternative to supplying paper materials
- Reuse scrap paper for internal documents or for scrap writing pads

Our photocopier is Certified Energy Star and we use 100% recycled paper in our course materials.

As well, when possible, we are choosing facilities that participate in Green Programs such as the Green Key ECO-Rating Program and the Energy Star for Hospitality.

As new products and research are introduced into the market, we will endeavour to search them out and make changes that are consistent with a green philosophy.
